

How to configure reports

Overview

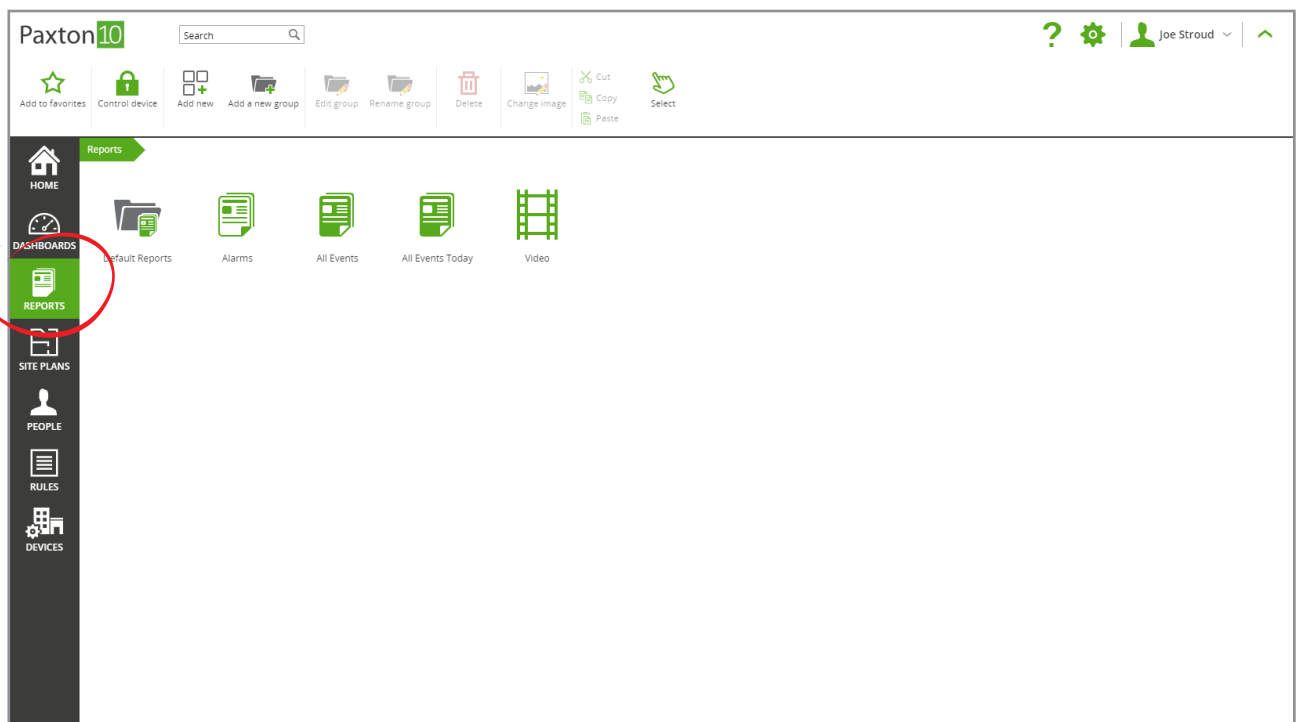

Reports are a way of viewing historical events that have happened in the system.

Whenever something happens; a person scans their token, updates a building permission, or a device goes offline, an event is created. Reports allow these events to be viewed and sorted in different ways that make the information easy to use.

Opening a report

1. Go to the '**Reports**' section
2. Open the report by clicking on it

The report will list the most recent events and will update automatically as new events occur.

Customise a report

Filter events

Filter the events so that the report only shows the information you're interested in.

1. While viewing events, click on the filter buttons in the column headers next to each field

Four filters are available:

- a. **People** – show events for the selected people
- b. **Devices** – show events for the selected devices
- c. **Time** – show events that happened within a specified time period
- d. **Event** – show specific types of events

2. Select the **people, devices, time period** and **events** for the report to show

The screenshot displays the Paxton10 software interface. A 'FILTER - NEW REPORT' dialog box is open, showing the 'People' tab. The dialog box has a search bar and a list of roles: Administration, Cleaners, Management, Support, Visitors, and Jonny. The 'Management' role is selected and circled in red. The background shows a list of events with columns for DATE/TIME, PERSON, WHERE, and INFORMATION. The 'PERSON' column lists names like Jonny Collett and Thomas Faith, and the 'WHERE' column lists locations like 6413985. The 'INFORMATION' column lists various events like 'Site plan modified [Ground Floor]' and 'Access permitted [Entry reader]'.

Additionally, check the box in the ribbon next to '**Only events with video**' to only show events with video footage associated with them.

Adding or removing columns

The fields displayed in a report can be changed to display the information that is required.

1. While viewing a report, select '**Field chooser**' from the ribbon
2. Check the box next to each field to display in the report

14/08/2019 13:47:33	Jonny Collett		Site plan modified [Ground Floor]
14/08/2019 13:46:15	Jonny Collett		Operator logged on
14/08/2019 13:46:06	Jonny Collett		Site plan modified [Ground Floor]
14/08/2019 13:42:07	Thomas Faith	6413985	Access permitted [Entry reader]
14/08/2019 13:42:00	Jonny Collett	6413985	Access permitted [Entry reader]

Creating a new report

1. From the ribbon, select 'Add new'
2. Select 'Event report'

3. Select the people, devices, time frame and events for the report to show
4. Select 'OK' to close the window

Default reports

There are 14 default reports. These reports provide the platform for creating more specific reports.

- **All Events** – List of all events, starting with the most recent
- **All Events Last Week** – All events that happened over the seven days prior to Sunday
- **All Events This Week** – All events that have happened since Monday
- **All Events Today** – All events that have happened today
- **All Events Yesterday** – All events that happened yesterday
- **Expired Tokens** – List of credentials held by people whose expiry date has passed
- **First and Last Events** – List of first and last events by each person today
- **Last Known Position** – Lists the last event for each person
- **List All Users** – List of all people on the system
- **Lost Tokens** – Lists all tokens on the system that are marked as lost
- **Permissions** – Allows you to report on who has permissions, where and when
- **Token Last Used** – List of all valid credentials and the date and time they were last used
- **Unused Tokens** – List of tokens that have not been used in the last 3 months
- **Who's Been in Today** – List of people that have been active today
