

Energy saving made simple.

Use Paxton access control to save energy & keep costs down.

It's now more important than ever to make the most of the products and services available to limit energy wastage; it's not just good for our pockets, but it can also have a real beneficial impact on our planet. Read on to find out how Paxton products can help you save energy.

Paxton access control, used in the right way, can help limit the knock-on effects of the increase in energy costs this year and run your buildings more efficiently. In this handy guide we'll cover all the benefits of using our products in an energy saving way, detailing how you can get started saving energy and money, with your security system.

Auto switch off when utilities are not needed

Limit use of high-energy appliances

Limit mains power use with battery operated door handles

Minimise unnecessary travel to site

Here we'll talk you through our energy-efficient solutions.

Auto switch off when utilities are not needed.

System events in your access control software can trigger automated actions within your building. As the last person on site leaves at the end of the day, the system can be set to register this and turn off lights, heating and air con as desired. This can make a real difference to a building's efficiency and energy bills.

Ask your installer for:

Triggers & Actions in Net2 or Paxton10 software

Limit use of high-energy appliances.

Our specially designed reader controls the electrical connection to switch equipment on and off.

Our cleverly designed reader requires a user to insert their access card, and acts like a power switch. When an authorised access card is inserted, the appliance switches on, and when the user leaves and takes their card, it switches off.

Ask your installer for: Net2 Energy Saving Reader Proximity ISO cards

& there's more...

Limit mains power use with battery operated door handles.

Secure your doors and save power.

This efficiently designed door handle operates in low power mode when not in use, which saves energy across a building. As there are no wires, it can be installed quickly and easily with minimal disruption.

Ask your installer for: PaxLock Pro, wireless door handles

Already got a Paxton system?

All of these features and products can be added to your existing access control solution quickly and easily.

New to Paxton?

Energy saving products and features can be activated in your new system from day one!

Minimise unnecessary travel.

Cut site visits and update your system from afar with remote management.

Our handy app, available for iOS and Android, can save you out of hours trips if the lights or any energy consuming appliances are left on out of hours. Simply login remotely and turn it off from your app.

Ask your installer for: Paxton Connect Net2 and Paxton 10

Energy Saving Paxton Systems in Action – **HARP Housing Charity**

HARP is a Southend based charity funded by donations that provides emergency housing and long-term solutions, enabling people to rebuild their lives and live independently in the community. Housing up to 122 people at any one time, the charity needed a way to run their sites cost-efficiently. Using our PaxLock products, they were able to prevent energy wastage with battery-operated access control, using no mains power. With Net2 Energy Saving Readers in every room, all electricity and lighting would be powered down when residents leave, minimising energy costs.

See how a combination of the PaxLocks and Energy Saving readers has been used to keep their costs down. www.paxton-access.com/case-studies/harp
